Portfolio: nickmabz.github.io/portfolio

PROFESSIONAL PROFILE

Data professional turned versatile AI practitioner, with 2+ years of experience in analytics, data engineering, and machine learning, complemented by designing and building **Lumen**, a full-stack AI coding assistant (Next.js, TypeScript, RAG, Supabase). Proven impact: 30% faster executive reporting, capability to lift customer retention via machine learning models e.g., XGBoost churn model and 40+ hours saved monthly through ETL automation. Currently pursuing a Master's in Computer Science (AI & Data Science) at CESI École d'Ingénieurs, sitting at the intersection of analytics, machine learning, and AI application development.

KEY SKILLS

Analytics & BI: Power BI, DAX, Tableau, GA4, BigQuery, KPI Reporting, Data Visualization

Machine Learning & AI: XGBoost, SHAP, SMOTE, Feature Engineering, RAG, Vector Search, NLP, Prompt Engineering

Development: Python, TypeScript/JavaScript, SQL, React, Next.js 16, Node.js, REST APIs, Authentication (Clerk)

Data Engineering: ETL/ELT, dbt, Hadoop, Hive, Data Pipelines, PostgreSQL, Supabase, Data Quality

Cloud & Tools: AWS, Docker, Git, Linux, CI/CD (basics)

PROFESSIONAL EXPERIENCE

Data Analyst – Sanlam Allianz Kenya, Innovation & Growth

Nov 2024 – Sept 2025

- Designed and automated Python data pipelines ingesting multi-source feeds, saving 40+ hours of manual processing per month
- Developed a predictive XGBoost churn model (ROC-AUC 0.96, SMOTE rebalancing, SHAP interpretability), driving increase in customer retention focus.
- Integrated GA4/GTM APIs (25+ custom events) with automated BigQuery exports, contributing to an 18% increase in recovered leads
- Led a suite of Power BI dashboards (advanced DAX measures), cutting executive reporting time by 30%

Junior Data Scientist – GW Dynamics

Jan 2023 – Aug 2024

- Built data ingestion pipelines (APIs, databases, flat files), reducing processing latency by 45%
- Designed predictive models and interactive dashboards (Power BI, Tableau), improving client operational efficiency by 30%

RELEVANT PROJECTS

Lumen – Full-Stack AI Coding Assistant · Next.js, TypeScript, RAG, Supabase, NLP

- Real-time streaming, RAG-based code awareness, semantic vector search, authentication (Clerk)

Customer Churn Prediction · Python, XGBoost, Scikit-learn, SHAP, SMOTE

- Compared 3 ML models across 30,000 insurance records; full production pipeline, best F1 with XGBoost

Big Data Pipeline · Hadoop, Hive, dbt, Docker, Power BI, PostgreSQL

- End-to-end multi-source ETL pipeline; Hive warehouse connected to Power BI for analytics dashboards

GA4 & GTM Marketing Analytics · GA4, Google Tag Manager, BigQuery

- 25+ custom events, automated BigQuery exports → 18% increase in recovered leads

EDUCATION

Master's in Computer Science – AI & Data Science, CESI École d'Ingénieurs, Lyon, France

Sept 2025 - 2027

Bachelor's in Business & IT, Strathmore University, Nairobi, Kenya

Apr 2020 - Dec 2023

Networking Specialization · Thesis: Parking Space Prediction using Machine Learning
